ABOUT VIESID

The Vienna School of Interdisciplinary Dentistry - VieSID is a non-for-profit organization established in 2008 by Prof. Rudolf Slavicek and his son Christian Slavicek, Ing., promoting individualized functional dentistry within occlusion medicine. VieSID activities revolve around two main foci, namely postgraduate education for dentists and dental technicians, and research supporting dentistry. VieSID aims to preserve and advance Prof. Rudolf Slavicek's lifework and integrates concepts of gnathology and craniomandibular orthodontics according to

Prof. Sadao Sato. Based on Prof. Slavicek's deep understanding of the stomatognathic system, VieSID proposes an individualized and interdisciplinary approach to patients' health care, especially suitable for the diagnosis and treatment of patients with craniomandibular dysfunctions and for oral rehabilitation. The participants are provided with strong theoretical basis coupled by hands-on training in the use of the tools for the clinical, cephalometric, instrumental and clinical instrumental analyses.

Through this knowledge, the participants can proficiently analyze the morphology, function and kinematics of the stomatognathic structures. The education received can readily be applied in the clinical routine and is compatible with both analog and digital workflows. VieSID's courses are certified by the Medical University of Vienna, with which VieSID is in close cooperation. VieSID's classes are carried out in the VieSID Education

Center, a modern and welcoming lecture room located at the University Clinic of Dentistry Vienna and in the Clinic's clinical rooms. VieSID operates also internationally thanks to associated partners in Europe, as well as Asia and North and South Americas. This brochure presents the program of the courses held at the University Clinic of Dentistry Vienna, Medical University of Vienna.

VENUE

VieSID Education Center, University Clinic of Dentistry Vienna

Our courses are held in our brand-new Education Center at the University Clinic of Dentistry Vienna, Medical University of Vienna, Austria. This modern lecture room is designed to provide the participants with a comfortable learning experience. The practical training is conducted in the clinical rooms of the University Clinic of Dentistry

Vienna, which is equipped with high-standard dental chairs and equipment. The University Clinic of Dentistry Vienna and the Medical University of Vienna are established medical institutions in Europe and well-known research centers.

HOSTS AND MENTORS

Prof. Dr. Rudolf Slavicek, 1928 - 2022 † Mentor and Mastermind

Prof. Dr. Rudolf Slavicek was an internationally renowned authority in diagnosis, treatment planning and therapy based on the principles of interdisciplinary dentistry, for which he has contributed to set the standards. Beginning from the 1970s, he worked and lectured in

various countries, including Universities in Austria and in the rest of Europe, Asia and USA, inspiring generations of young dentists. His teachings and his knowledge are the fundamentals of the VieSID program. He still represents a strong reference point for the VieSID Community.

Ing. Christian Slavicek - Founder of VieSID

Christian Slavicek has led VieSID since its foundation in 2008. Since then, he has established a wide network of collaborators including clinicians, academics, and educators making it possible for VieSID to develop educational and scientific activities with the support of several Institutions, including the Medical University of Vienna and the University of Vienna. He has recently signed an agreement with the Superior

Council of Central American Universities (CSUCA) for the advancement of interdisciplinary research and education in Oral Medicine in Central America and an agreement for scientific cooperation with the University of Costa Rica. Having developed devices and software for the morphometric and functional analysis of the masticatory system, he has gained a deep knowledge on the function and kinematics of the jaw.

Dr. Daniele Togni, MSc

Dr. Daniele Togni is specialized in dentistry and dental prosthetics which he practices based on the most modern gnathological principles. He obtained his medical degree from the University of Milan, Italy in 1988 and in 2011 concluded successfully the MSc in Dental Sciences at Danube University Krems, under the supervision of

Prof. Slavicek. He joined the VieSID team as an instructor in 2015. His points of strength are the deep knowledge of the dental literature combined with the use of interdisciplinary dentistry tools. Since 2024 he is the educational coordinator of VieSID.

Cinzia Fornai, MSc, PhD

Cinzia Fornai, PhD, is the chairwoman of VieSID, coordinates VieSID scientific activities and is member of VieSID's board. She offers scientific and didactical support to the VieSID courses. She is an evolutionary anthropologist by training and her interest is focused on clinical and scientific aspects of the stomatognathic system. In 2001 she obtained a Master of Science in Na-

tural Sciences, followed by a Master of Science in Paleoanthropology in 2009. In 2016, she defended her PhD in Biology through the Department of Evolutionary Anthropology, University of Vienna, and worked as a postdoc at the Institute of Evolutionary Medicine, University of Zurich, until 2021, when she joined VieSID.

LECTURERS AND ASSISTANTS

Prof. Dr. Sadao Sato

Prof. Dr. Sadao Sato is an internationally recognized specialist in the field of orthodontics. In 1979, he became assistant professor in Kanagawa Dental College. In 1989 he was appointed associate professor. In 1996 he became professor in orthodontics at Kanagawa Dental College and later on he was appointed as dean. Between 1991

and 2001, Prof. Sato was president of the Japan MEAW Technique and Research Foundation. From 1992, he has been member of the Angle Society of Orthodontics. Prof. Sato and Prof. Slavicek worked closely influencing each other's clinical mind. Accordingly, his treatment concepts are integrated in the VieSID program.

Dr. Elöd Úry, MSc

Dr. Elöd Úry is an expert prosthodontist highly trained in the clinical interpretation of the condylography and the rehabilitation of the TMJ. Through his long-term work with functional instrumentation, also within the digital environment, he has gained fine technical skills and a deep understanding of 3D jaw kinematics. He has owned a private dental clinic in Sopron since 1996. After graduating from the Semmel-

weis Medical University in Budapest, he received an MSc in Dental Sciences under the supervision of Prof. Slavicek. He has participated in several post-graduate courses before becoming a VieSID instructor. He is currently enrolled in a PhD program through the Department of Evolutionary Anthropology, University of Vienna, focused on the structural and functional analysis of the stomatognathic system.

Dr. Ian Tester, DDS, MSc

Dr. Ian Tester practices general dentistry in St. Catharines with a focus on complex dysfunctional patients. He is a fellow and past president of the Canadian Academy of Restorative Dentistry and Prosthodontics and a member of numerous dental organizations including the American Academy of Restorative Dentistry. Under the

guidance of Prof. Slavicek, he obtained a master degree in Dental Sciences at Danube University in Krems Austria, in 2004. Since then, he has been lecturing internationally on complex treatment planning, including functional diagnostic and treatment of dysfunction based on occlusal reconstruction.

Kim Parlett, DDS, MSc

Kim Parlett runs his private practice in Bracebridge, Ontario, Canada. He is dedicated to the treatment and rehabilitation of dysfunctional patients. For over 3 decades, he has practiced a variety of hard and soft tissue techniques to provide predictable implant supported prosthodontic and orthodontic solutions centered around optimal function and esthetics. He received his doctorate of dentistry from the University of Toronto and obtained a Master of Science in advanced dentistry in 2004 through the Donau University, Austria under the guidance of Prof. Slavicek.

LECTURERS AND ASSISTANTS

Dr. Alain Landry, MSc

Based on his experience as a dental practitioner, Dr. Alain Landry saw the need of dedicated treatment for patients affected by craniomandibular disorders. He specialized in the use of combined orthodontics and prosthodontics treatments (removable, fixed and implant-supported) for his patients. Encouraged by several

of his colleagues, he decided to found the „Alain Landry Dental Institute“, in 1992, where he openly shares his clinical experience and teaches the methods of controlled mandibular repositions, which he masters and routinely applies for the well-being of his patients.

Dr. Alejandra Londoño, DDS, MSc

Dr. Alejandra Londoño is an orthodontist specialized in functional analysis of the masticatory system and condylography. Her experience derives from advanced studies, her clinical practice and research activities. She graduated and specialized in orthodontics in Colombia and

obtained a Master of Science in Prosthodontics at the Medical University of Vienna. She successfully conducted further postgraduate studies at the Danube University, Austria and Kanagawa Dental University, Japan. She attended the VieSID courses before joining the VieSID team as instructor.

Dr. Miguel Assis, DDS, MSc

Dr. Miguel Assis is a specialized orthodontist practicing the concepts of interdisciplinary dentistry while educating himself through postgraduate courses on advanced orthodontic techniques and function and dysfunction of the masticatory system at various schools, including a Master of Science in prosthodontics at the

Medical University of Vienna, the Kanagawa Dental University, Japan, and the Santiago de Compostela University. He attended the VieSID courses before becoming a VieSID instructor himself. His expertise includes the use of condylography as monitoring tool supporting the diagnostic assessment.

Dr. Andriy Klovaneets, DMD, MSc

Dr. Andriy Klovaneets is specialized in prosthodontics, oral surgery and implantology and in the diagnosis and treatment of CMD. He first graduated at Danylo Halytsky Lviv National Medical University, Ukraine. He graduated as Master of Science in Prosthodontics through the Medical University of Vienna and acquired further post-

graduate education through the VieSID courses. He became a lecturer for VieSID in 2018.

LECTURERS AND ASSISTANTS

DT Stefan Thunert, MSc

Stefan Thunert, DT, is a specialist in functional and aesthetic dental technologies following the VieSID's concept in reconstructive dentistry. He has owned a dental laboratory since 2000. In 2011, he achieved a Master of Science through the Danube University in Krems. He joined the

VieSID lecturer team in 2014. He has a deep understanding of the stomatognathic system and the clinical protocols, which allows him to establish effective communication with the dentists.

DT Karin Graichen, MSc

Karin Graichen, DT, is a highly experienced teacher in dental techniques. She began to work as a dental technician in 1990, and opened her dental laboratory 10 years later. She now coordinates a large team of collaborators in her laboratory. Her postgraduate education includes

an MSc in Dental Sciences for Dental Laboratory through the Danube University, Krems, Austria. She joined the Vie-SID's team in 2008. Thanks to her didactical skills, she effectively conveys knowledge to the participants, facilitating learning.

Dr. Anastasia Saltykova, MSc

Dr. Anastasia Saltykova is an orthodontist operating in her private practice in Moscow. She is an expert in the application of clinical instrumental functional analysis for TMJ treatment and subsequent occlusal rehabilitation. She graduated from Moscow University, Russia, and obtained an MSc in Dental Sciences, at Danube

University, Krems, Austria, where she also worked as an assistant to Prof. Rudolf Slavicek. Through this close collaboration, she gained a deep and comprehensive understanding of the Slavicek concept and, thus, since 2008, she has been an invaluable VieSID team member.

Dr. Diwakar Singh, MSc

Dr. Diwakar Singh obtained a BSc in Dental Surgery Punjab, India in 2005. 2007:PG Diploma with Prof. Rudolf Slavicek in TMD Functional Diagnosis, AT. In 2014 he achieved a MSc in Dental Sciences (on Craniofacial-Orthodontics), MEAW technique with Prof Sadao Sato for CMD patients. 2015: PG Diploma in Controlled Man-

dibular Repositioning, Austrian Dental Council. 2017:Co-lecturer with Prof. Alain Landry for Controlled Mandibular Repositioning course at VieSID. PhD student in TMD (Internal derangements) N790 Applied Medical Science

LECTURERS AND ASSISTANTS

Christian Betzl, MSc

Christian Betzl studied Dentistry at the University of Munich. He became an Assistant Dentist in a private dental office, in 2003, a partner emphasizing the multidisciplinary treatment approach. He is a member of the gnathological Society of Stuttgart, German Association of Periodontology and Society of functional Diagnostics and Therapy. Meeting the VieSID con-

cept in 2005, obtained a comprehensive training attending the Basic Course, Sato's courses and Master course in Vienna. His strong suit is teamwork in functional cases and the necessary effective communication between clinicians, dental technicians, and specialists in other medical fields for interdisciplinary treatment.

Dr. Diana Baddredin, MSc

Dr. Diana Badreddin graduated from the Medical Universities of Krasnodar and Barcelona, and further studied in Italy and Austria. Supervised by Prof. Slavicek, she obtained a MSc in Dental Sciences at Donube University, Krems. She then specialised in functional orthodontics and

occlusal medicine with Prof. Sato. She gained invaluable clinical experience while assisting Prof. Slavicek and joined the VieSID team of lecturers in 2014. Her range of expertise includes orthodontics, condylographic analyses, the treatment of cranio-mandibular dysfunctions, and posture correction.

Dr. Paola Mancia, MSc

Dr. Paola Mancia first graduated in dentistry through "Tor Vergata" University in Rome. In 2009 she attended a postgraduate course on function and disfunction of the masticatory organ, at Danube University, Krems, with Prof. Slavicek and studied further with Prof. Sato at-

tending the VieSID Orthodontic Course. She lectures in various courses and actively participates in congresses and workshops. In her private office in Rome, she focuses on the diagnosis and orthodontic rehabilitation of dysfunctional patients. She assists in VieSID courses since 2016.

DT Francesco Logreco

Francesco Logreco, DT, is the owner of the DSC laboratory in Conversano, Italy. He specialized in computer-aided applications in the field of dental technology. He obtained a dental technician diploma through IPSIA, Bari, Italy, in 1999. In 2015, he achieved a Hyperdent certification

as a CAM programmer and studied intensively coronal anatomy at the SA.VI.DENT laboratory by Lanfranco Santocchi. He joined the VieSID team in 2024, contributing with his deep understanding of the occlusion and advanced technical skills and inventiveness within the digital environment.

LECTURERS AND ASSISTANTS

DT Federica Ogliara, MSc

Dr Federica Ogliara,DT, owns a dental private office, treating complex cases by means of orthodontics, prosthodontics and conservative therapies. In 1995 she achieved a DT diploma; in 2000: graduated in Dentistry and Dental Prosthodontics; 2011-2012: Academic expert in "Function and Dysfunctions of the Masticatory organ"

and "Therapy and Treatment Concepts Course" by Prof. Salvicsek; VieSID Continuum Advanced Orthodontics in Craniofacial Dysfunctions by Prof. Sato; VieSID Controlled Mandibular Repositioning by Dr. Landry; She will support in the Italian VieSID Basic Course.

Darya Grygoryeva, MSc

Graduated and specialized in orthodontics and prosthodontics in Ukraine and studied further in Russia, Korea, Japan and Austria, nostrified diploma in Slovakia. She specialized in functional orthodontics and occlusal medicine in a three-years course by Prof. Sato. She works with multidisciplinary functional cases in kids,

adolescents and adults using the mandibular repositioning approach achieving treatment goals with analog and digital dental instruments and physical rehabilitation. She has been an official member of VieSID since 2022, working as a clinical assistant, translator and provides organization support with the courses. Private practice since 2009.

Dr. Petros Kokkinos, DDS

Graduate of the School of Dentistry, National and Kapodistrian University of Athens. Specialized in Orthodontics at Louisiana State University with further training in Craniofacial Orthodontics and Occlusion Medicine (San Francisco, Prof. Sadao Sato) and Controlled Mandibular Repositioning (Vienna, Prof. Alain Landry) for TMJ dysfunctions. Since 2023, scientific and teaching member of VIESID.

Served 18 years on the Board of the Orthodontic Society of Cyprus, twice as president; AAO Ambassador (2012-2016). Member of multiple European and American scientific societies and study clubs. Founder of VIESID Cyprus. Lives and practices in Limassol, directing Kokkinos Smile Clinic and the Center for the Treatment of Craniofacial Dysfunctions and Skeletal Disharmonies.

LECTURERS AND ASSISTANTS

Dr. Deepti Garg, MDSc

Dr. Deepti Garg received a Bachelors in Dental Sciences (India 2005), and a MSc in Dental Sciences at the University Clinic of Dentistry, Medical University Vienna in 2014. She participated in the Prosthetic Continuum focus Prosthetics applied rehabilitation at VieSID in 2018-2019.

She received a diploma in Orthodontics in 2021. She owns a private dental office in Vienna since 2021. She is pursuing a PhD degree through the University Dental Clinic, Vienna. She is a member of the Indian Dental Association and Punjab Dental Council. She assists course for VieSID, since 2024.

Andrei Hudkou

A detail-oriented and compassionate dentist with over 9 years of professional experience in treating temporomandibular disorders and managing complex dental cases. Currently practicing at Dentical Center Wilanów in Warsaw, Andrei Hudkou combines advanced diagnostic

skills with an interdisciplinary approach to deliver high-quality, patient-centered care. Educated at Belarussian State Medical University, he is dedicated to continuous improvement, safety, and excellence in every aspect of dental practice.

Juliana Baddredin, MSc

Dr. Dzhuliana Badreddin graduated from the Medical Universities of Krasnodar and Barcelona, and obtained a MSc in Periodontology at the University of Turin. She further studied occlusion medicine with Prof. Slavicek and Prof. Sato at VieSID, where she gained clinical experience

too. In 2015, she joined VieSID's team as a clinical assistant. Her range of expertise includes prosthodontics, condylographic analyses, and the treatment of craniomandibular dysfunctions.

Stéphan Provencher, TPAD

Graduated in 1981 from Edouard-Montpetit College dental technology program, Stéphan Provencher joined its faculty in 1985 teaching design and fabrication of implant retained fixed partial denture. Starting 1992 he operates a Boutique dental lab with main focus on comprehensive and functional dentistry rehab cases.

Currently involved in the Munich Group and VieSID Canada teams he lectures and conduct workshops for dental technicians and dentists involved in interdisciplinary dentistry on how to produce highly aesthetic functional prosthetics using digital and traditional communication tools.

BASIC CURRICULUM

Learn from the best

The Basic Curriculum is a postgraduate education course for general dentists, orthodontists, prosthodontists, periodontologists and dental technicians, who are interested in receiving comprehensive education on various aspects of function and dysfunction of the craniofacial system. The content is based on the concepts of Prof. Rudolf Slavicek which VieSID is continuously developing. This fundamental and intensive course offers theoretical lessons combined with practical training and assigned homework. The participants will be able to implement the gained knowledge directly into their daily work.

The main topics include:

- standardized case documentation from diagnostic data collection to final evaluation

- clinical functional analysis of dental models
- hinge axis location and analysis of the mandibular kinematics with interpretation of the condylar tracings
- programming of the articulator
- design of functional occlusion through wax-up
- digital workflows

The duration of the Basic Curriculum is 15 days in total, divided into 3 modules, of 5 days each.

Each module includes a weekend, so that absence from the dental office is kept to a minimum of working days. A final examination and presentation of one fully-documented clinical case will allow the participants to successfully conclude the course.

CONTINUUM THERAPY

The VieSID Therapy Continuum course is focused on the rehabilitation of the stomatognathic system with emphasis on prosthodontic techniques for oral rehabilitation. It is conducted by most experienced VieSID instructors. The functions of the masticatory system, occlusion and anesthetics principles, and the patients' needs must be considered to achieve an individualized oral rehabilitation with long-term stability. Thus, the aim of the Therapy Continuum is to guide participants from the initial diagnostic findings through the rehabilitation process of the masticatory system, considering the gnathological triad composed of TMJ, neuromuscular system and occlusion. Key topics of the Therapy Continuum include TMJ treatment, splint therapy, pre-prosthodontic orthodontics, full denture, pre-prosthodontic implant, temporization and final restoration. The Therapy Continuum consists of 2 parts: Level 1 and Level 2.

Focus: Prosthetics Applied Rehabilitation: Function and Esthetics

Each level is subdivided into 4 modules of 3 days each. Therefore, the entire Therapy Course training amounts to a total of 24 teaching days, spread over 2 years. Applicants to Level 1 need to have successfully completed the Basic Curriculum. During the course, study cases will be proposed in combination with advanced theoretical knowledge. The participants will be able to work on their cases supported by the instructors. The participation of the dental technicians will be promoted to allow the clinicians to successfully carry out the occlusal rehabilitation. Lecturers:

Dr. Elöd Úry, MSc
Dr. Ian Tester, DDS, MSc
Kim Parlett, DDS, MSc
Christian Betzl, MDSc
Dr. Anastasia Saltykova, MSc
Stéphan Provencher, TPA

CONTINUUM ORTHODONTIC

Prof. Sadao Sato developed the MEAW (Multiloop-Edge-wise-Arch-Wire) technique, which has proved to be very successful for corrections of malposition of the teeth, as well as the denture frame analysis defining the relation between occlusal plane and jaw-facial skeleton. According to Prof. Sadao Sato's concept the main focus of this Orthodontic Course is to supply diagnostic and therapy methods to the trainees. The continuum specializes in theories on development and treatment of the malocclusion, fundamental concepts of gnathology and orthodontic practice. During this course all participants are required to present their own patient cases to get support from the instructors and the course director in order to elaborate all necessary treatment steps. The modular structure of the continuum allows that the participants are guided through the complete

Focus: Orthodontics in Craniofacial Dysfunction

treatment process also of complex cases. All our courses are organized in cooperation with the Medical University of Vienna and take place at the University Clinic of Dentistry in Vienna. At the end of the course participants will pass an examination and will receive a diploma for the successfully passed course. The Continuum Orthodontic is divided into 2 parts. Part 1 consists of 4 modules, Part 2 consists of 3 modules. All together 26 days of education. Applicants for Part 1 need to successfully complete the Basic Curriculum.

Lecturers and Assistants:

Dr. Alejandra Londoño, MSc

Dr. Miguel Assis, MSc

Dr. Petros Kokkinos, MSc

Dr. Paola Mancia; MSc

EXCLUSIVE TUTORIAL

This course offers the finest and most recent schools of thought in North America, Europe and Japan. This program enables dentists to acquire new knowledge and develop new competences, which they can incorporate into the heart of their practices for the well-being of their patients. This exclusive course is limited to 10 participants for maximum benefit and efficacy. This continuum is for dentists, who want to treat more complex cases of cranio-mandibular disorders (C.M.D.). The teaching includes the essential concepts of Professor Slavicek, electronic condylography, computerized cephalometry, with an emphasis on controlled mandibular repositioning (C.M.R.), a method developed by Dr. Alain Landry in 1994.

Most schools of thought on C.M.D. have focused on the treatment of neuro-muscular disorders.

In C.M.D. cases, with regard to internal derangements

(I.D.) and degenerative joint disease (D.J.D.), these approaches are ineffective and sometimes ill-advised.

For this reason, the „Controlled Mandibular Repositioning“ was developed. This method dramatically increases the success rate of internal derangement cases and of degenerative joint disease cases.

Applicants for this course need to successfully complete the VieSID Basic Curriculum.

Supervisor:

Dr. Alain Landry, MSc

Lecturer:

Dr. Diwakar Singh, MSc

Assistant:

Dr. Deepti Garg, MSc

DENTAL TECHNICIAN CURRICULUM

The VieSID Dental Technician course offers fundamental knowledge of individualized functional dentistry using patient-specific parameters. The course includes hands-on work in the fundamental steps of the technical work, such as models' articulation, wax-up for different dental classes, and production of personalized splints. An introduction to the digital workflows as per the VieSID principles of individualized functional dentistry will also be provided. While this course is conceived for dental technicians, it is also suitable for dentists who wish to acquire dental technicians' competence. The combination of theoretical lectures and supervised practical training will advance the participants' knowledge and skills, thereby enhancing their working life and proficiency.

Some main topics:

- The "Slavicek concept": general notions and principles for occlusal rehabilitation

Slavicek-Concept for Dental Technicians

- Fundamentals in model work and facebow, arbitrary and axis mounting, imounting of digital impressions
- "How to use" – Articulator and its additional parts
- Wax up class 1 / 2 / 3
- Splint production in exocad
- Theory about splints according to "Slavicek Concept" (retrusive guidance on splint surface)
- Use of CPV
- Digital Class I wax-up (demonstration)
- Discussion about the concept based on cases, different dental classes and possibilities in the digital world and of the use of new technologies within the VieSID's concept

Lecturers:

DT Stefan Thunert, MSc

DT Karin Graichen, MSc

Assistant: DT Logreco Francesco

INTERCEPTIVE ORTHODONTICS

A highly clinically and technically driven program on early treatment

The advanced Interceptive Orthodontics course represents a comprehensive program for early diagnosis and treatment, including targeted diagnostic and therapeutic procedures, and hands-on training using dedicated instrumentation and orthodontic tools, such as Functional Positioning Overlays (FPO). Specifically designed for orthodontists, it is also open to dentists from other specialties who wish to deepen their skills in treating children with deciduous dentition or in the first phases of mixed dentition. Within the course, lectures dedicated to dental technologies for the fabrication of overlays will be open to dental technicians as well.

The program is distributed across four modules, each focusing on different aspects – from initial case documentation to advanced digital workflows and complex case management. The instructor will guide partici-

pants through the principles of interceptive orthodontics according to the VieSID concept, also based on their cases treated over the course of the program.

In summary, the Interceptive Orthodontics Course is ideal for orthodontists, dentists, and experienced dental professionals who wish to:

- Deepen their understanding of Interceptive Orthodontics according to the VieSID concept
- Improve diagnostic accuracy and treatment planning
- Practice both analog and digital workflows
- Gain practical experience with the clinical tools and techniques for the early treatment of children

Main Lecturer:

DT Federica Ogliara, MSc

DT Francesco Logreco (technical instructor)

ADVANCED CONDYLOGRAPHY TUTORIAL

„Clinical Instrumental Analysis“ (condylography) has been proven to be an important part of the diagnostic approach in interdisciplinary dentistry. The non-invasive method of condylography monitors the individual patient movement of the mandible within 6 deg. of freedom. In the center of interest stands the translator and rotatory component of hinge-axis movement. Condylography recordings are useful to program condylar housing of semi- and full-adjustable articulators, according to the individual patient movement patterns. The data may also be used to judge the mobility and motility of the TMJs. Based on standardized so-called boarder movements (Protrusion, Mediotrusion R&L, Open/Close) a clinical- instrumental preliminary assessment of the functional status can be performed. Habitual functional movements (Bruxing, Speech, Swallow, etc.) can be analyzed and integrated into instrumental analysis in the articulator.

Condylography in detail - Hands-on and Theory

Day 1 & 2 - Clinical procedures of condylography:

Beside short theory sequences on important topics, the tutorial focuses on the hands-on sessions. Split up into groups of maximum 5 persons, the participants get the chance to learn the advanced procedures of clinical Condylography in detail. Guided by a clinical teacher and supervised by Dr. Úry, effective learning is guaranteed.

Day 3 & 4 - Condylography diagnostics:

The second part of this advanced tutorial is designed as a lecture. Within those 2 days the participants learn the basic principles of condylography diagnostics, occlusion and TMJ – anatomy and – pathologies. The important of the hinge-axis, condylography aspects in treatment planning and advanced diagnostic considerations will also be part of the course content.

Lecturers: Dr. Elöd Úry, MSc

Assistance: VieSID team

SUMMER SCHOOL

International Congress on Occlusion Medicine and Interdisciplinary Dentistry

The VieSID Summer School is an international congress on occlusion and interdisciplinary dentistry. Every summer it brings together the worldwide community of professionals, interested in occlusion and function in dental medicine. The Summer School is offering unique and contemporary lectures by leading international experts, complex case presentations and a lot of interactive sessions, such as table clinics and poster presentations. The collegial atmosphere of VieSID Summer School allows exchange with renowned specialists. The organizing committee creates plenty of room for dialogue and discussion in the official program as well as off the record. Summer School is aimed at all dentists, even without prior knowledge of the VieSID's concept.

SEMINARS & WORKSHOPS

TOPICS & AVAILABILITY ARE SUBJECT TO CHANGES

This seminar is conceived to illustrate the most relevant steps for professional work in functional dentistry in the digital environment, from the digitization of the dental arches to file exchange with CAD software for dental design, and allows exploring the CADIAS® 3D tools and functions.

The seminar includes theoretical lectures and practical work and covers the following points:

- Indirect and direct workflows in the digital assembly of dental models
- Preparation and segmentation of digital models
- The virtual articulator: mode of operation, functions, settings Integration of CADIAX data
- Digital occlusion analysis (both graphical and numerical)

- Static occlusal protocol
- Dynamic occlusal protocol
- CPM (Condylar Position Measurement) analysis
- CPV (Condylar Position Variator for mandibular repositioning)
- Occlusal design
- Exocad interface and data transfer from and to CADIAS® 3D

Selected patient cases will be shown to demonstrate the full range of functions and diagnostic possibilities of the system.

Lecturers:

Dr. Előd Úry, MSc

Thomas Haberl, MSc

SEMINARS & WORKSHOPS

TOPICS & AVAILABILITY ARE SUBJECT TO CHANGES

DIGITAL DENTAL TECHNOLOGIES WORKSHOP *within the VieSID concept of individualized functional dentistry*

This 3 day workshop is meant to provide the participants with the theoretical and especially practical knowledge necessary to apply state-of-the-art digital dental technologies within the VieSID concept. Thus, it is more suited to those who already have knowledge and understanding of occlusion and occlusal design according to the VieSID concept. This workshop is conceived for both dental technicians and dentists who are interested in digital protocols for intraoral model articulation, treatment planning and design. The course covers following points:

- GAMMA digital protocol and CADIAS 3D, theoretical notions
- Hands-on Training: analysis of the meshes, GAMMA digital protocol and CADIAS 3D, interface CADIAS 3D

- exocad (participants bring their own case)
- The use of curves of Spee and Wilson and occlusal plane
- 3DCoronal anatomy
- Theoretical notions for the construction of a splint in exocad using the GAMMA's parameters
- Demonstration and Hands-on training: crown modelling in exocad (Beginners: dataset is provided; Experts: own case)
- Hands on training: construction of digital splints (participants bring their own case)
- Hands on training: evaluation of aesthetic parameters using facial scans

Lecturer:

DT Francesco Logreco

SEMINARS & WORKSHOPS

TOPICS & AVAILABILITY ARE SUBJECT TO CHANGES

DIGITAL WAX - UP WORKSHOP

3-day hands-on workshop with a focus on digital wax-up according to Prof. Slavicek's concept for the occlusal classes I, II, and III (and crossbite). The workshop is carried out using exocad and integrating the patient's parameters exported from the GAMMA system. It is mostly practical, although the training will be supported by theoretical notions. The workshop objective is to allow the participants to acquire the necessary skills to design prosthetic rehabilitations (e.g., crowns, bridges) in line with Slavicek's principles of occlusion.

Optional Exocad Training Day: Exocad Basic Skill

This day can be booked separately from the workshop. It is designed for non-exocad users who must acquire the basic skills necessary for following the Digital Wax-up workshop. The content of this day will not be taught during the Digital Wax-up Workshop. Confident exocad users should refrain from registering for this day.

Lecturer:

DT Francesco Logreco

- ☐ 1: "Protrusion (Position F)"
- ☐ 2: "Mediotrusion right (Position 3)"
- ☐ 3: "Mediotrusion right (Position 4)"
- ☐ 4: "Mediotrusion right (Position 5)"
- ☐ 5: "Mediotrusion right (Position 6)"
- ☒ 6: "Mediotrusion left (Position 3)"
- ☐ 7: "Mediotrusion left (Position 4)"
- ☐ 8: "Mediotrusion left (Position 5)"
- ☐ 9: "Mediotrusion left (Position 6)"
- ☒ Seleziona/deseleziona tutto

Together, the Digital Dental Technologies and Digital Wax-up workshops cover the entire digital workflow necessary to finalize the tooth modeling project after the identification of the therapeutic position. Although they can be booked separately, note that the protocols and tools taught in the DDT course are propaedeutic to the Digital Wax-up course.

SEMINARS & WORKSHOPS

TOPICS & AVAILABILITY ARE SUBJECT TO CHANGES

CRANIOMANDIBULAR ORTHODONTICS SEMINAR - Prof. Sadao Sato

The goal of this seminar is to provide fundamental knowledge for successful orthodontic treatment of different types of malocclusions without premolar extraction and surgical intervention. Changes in facial vertical dimension and posterior occlusal plane during growth, and the corresponding adaptation of the mandible result in different types of malocclusions. Knowledge about the development of malocclusion during craniofacial growth inform the clinician on orthodontic treatment, thereby overcoming the understanding of orthodontics as means for mere alignment of teeth.

Topics:

- **General consideration of malocclusion:**
Illustration of the developmental mechanisms of malocclusion and the most effective therapeutic approaches.
- **Open bite, Skeletal Class II and Class III malocclusions:**
Explanation of the two possible types of open bite, and the high and low angle Class II and Class III subgroups, highlighting their different presentation and etiology and discussing the most effective treatment approaches.
- **Mandibular Lateral Displacement (MLD):**
how to correct the existing asymmetry that are known to compromise the TMJ function at the deviated side.
- **Orthodontic Treatment of Malocclusions with TMD:**
Concepts for diagnosis and therapeutic mandibular repositioning will be discussed.

Lecturer: Prof. Sadao Sato

SEMINARS & WORKSHOPS

TOPICS & AVAILABILITY ARE SUBJECT TO CHANGES

SPLINT WORKSHOP

Producing and working with the splint during treatment in the Slavicek concept

A 2-days hands-on workshop for dentists and dental technicians covering following topics:

- Theory of splints according to the Slavicek concept, including the usage of the condylography data's
- Theory of different splints and how to produce them
- Analog and digital (Exocad) fabrication, according to the needs of the participants in practice and theory
- Adjustment of splints in the articulator and mouth
- Remounting of splints and procedure after splint therapy - what comes next after the splint?
- Variator usage to produce a TP splint
- Adjustments on the participants own splint, that will be produced during the workshop

Lecturer:

DT Stefan Thunert, MSc

DENTAL ASSISTANT WORKSHOP

The dental assistant plays a crucial role in aiding the dentists, allowing them to focus on the clinical procedures without unnecessary distractions. This two-day workshop is designed to prepare dental assistants to support the clinicians working within the VieSID concept. The workshop offers them the opportunity to learn the practical and technical skills to organize the materials and equipment for the VieSID diagnostic protocol. In this workshop, they will learn also how to flawlessly coordinate with the dentists during the condylographic recording. They will also familiarize themselves with the GAMMA software for patients' data archiving and presentation. In particular, the participants will learn how to:

- Taking correct extra- and interoral photos
- Prepare and store the occlusograms
- Prepare the materials for impressions taking
- Mount the anatomic facebow
- Model the brux checkers
- Enter data in the GAMMA Dental software
- Preparation of RP bite wax
- Mount the casts in the articulator
- Prepare the of the materials and the equipment for condylographic recording
- Mount the device and clutch, using the kinematic facebow
- Assist doctors in locating the hinge axis
- Remove and clean the device

Lecturer:

Darya Grygoryeva, MSc
